Have you noticed on your home's roof, black or dark-browened streaks?

If so, don't mistake this as dirt, tree droppings or mildew.

What is it?

In fact, what you see is known as roof algae or roof mold. This unsightly algae feeds off of the limestone located in the roof shingles, and is nearly impossible to clean and prevent without the proper treatment.

Why Clean Your Roof?

Removing the algae from your roof offers many benefits to you and your home for years to come.

Curb Appeal

Homes that have been on the market for months, started to see immediate offers, just days after having their home's roof cleaned.

Pride of Ownership! Having a clean roof will make you proud of your home.

Prolong the life of your roof

Shingle manufacturers make a product that is designed to last 30 years, and untreated roof algae can cut that life span in half. Remember, the average price to replace asphalt roof shingles, is around: \$2.25 / Sq. Ft., compared to ~\$.20 / Sq Ft. to clean your roof.

Decrease Energy Costs

Shingle granules work to reflect the UV rays and heat away from the roof's surface. If they are gone or covered in algae, you will have a hotter roof, resulting in higher energy bills.

Satisfaction Guaranteed

Customer satisfaction and home restoration is our number one priority. We guarantee 100% customer satisfaction for all of our services.
